The Velleman WFS210 is the world’s first wlan dual channel digital storage oscilloscope geared towards tablet computers. The WFS210 is a compact, portable battery powered fully featured two channel oscilloscope.

Instead of a built-in screen it uses your tablet (iOS, Android™ or PC (Windows)) to display the measurements. Data exchange between the tablet and the oscilloscope is via wlan, there are no cables. Due to the wireless principle, the oscilloscope and the ‘screen’ do not need to be at the same location.
